PROFESSIONAL SUMMARY

Full-stack and React Native software engineer with 1+ years of experience building mobile and cloud applications for healthcare and wearable-device ecosystems. Specializes in the app and backend layers of connected products — reliable data pipelines that move data from paired devices through the mobile app to cloud servers via BLE and MQTT. Currently leads architecture for connected mobile platforms at a healthtech startup, owning everything from device-communication integration in the app to cloud-synced dashboards and product websites.

TECHNICAL SKILLS

Languages: C, Python, JavaScript, TypeScript, SQL, HTML5, CSS3

Mobile & Frontend: React Native, Expo, Android Development, React.js, Redux, Responsive UI Development

Backend & Databases: Node.js, Express.js, REST APIs, WebSockets, MQTT, MongoDB, MySQL

Cloud & DevOps: Linux, Linode, Git, GitHub, PM2, Nginx, Postman

EXPERIENCE

Application Lead — SlimIoT Technologies Pvt Ltd | Jul 2025 – Present

- Lead architecture and end-to-end development of React Native mobile applications for healthcare and wearable-device ecosystems, owning technical direction across the mobile app and backend integration layers.
- Design and implement BLE communication handling, MQTT data pipelines, and cloud-connected device-management systems that ensure reliable, real-time transmission of health data from paired devices to the app and server.
- Coordinate across firmware, hardware, backend, and mobile teams to ship scalable analytics solutions on a cross-functional product timeline.
- Build real-time monitoring dashboards and data-visualization modules used for live patient and device telemetry.

KEY PROJECTS

Dozemate: Sleep health monitoring platform

Tracks heart rate, HRV, respiration rate, movement, and stress from BLE-enabled wearables. Built the real-time device-to-app data sync pipeline for reliable transmission of health metrics, interactive sleep-stage and wellness-trend dashboards, and cloud-synced historical analytics for long-term health tracking.

Plawat Smart Band: Wearable health monitoring app

Supports BLE pairing, device provisioning, and cloud sync across multiple paired devices. Implemented custom alerts for abnormal health readings, real-time health analytics dashboards, and a scalable multi-device architecture with account-level data aggregation.

SlimTrack: GPS tracking application

Integrated with the nRF9161 DK cellular IoT module for live location tracking, geofencing with entry/exit alerts, route history, and trip summaries. Built the MQTT communication layer, a Node.js and MongoDB backend for device and location data, and deployed the full stack on Linode.

Stethopod: Digital stethoscope application

Enables real-time audio streaming over BLE from a connected stethoscope device to the app. Built recording and playback management, patient profile and history tracking, and secure cloud storage for medical audio data, with reliable low-latency BLE reconnection handling on the app side.

SlimIoT Website — slimiot.com

Designed and developed the official company website for SlimIoT Technologies, showcasing the product suite, company profile, and healthcare solutions with a responsive, modern UI.

Dozemate Website — dozemate.com

Designed and developed the marketing website for Dozemate, presenting the product's sleep-health monitoring features and driving user engagement through a responsive, conversion-focused design.

EDUCATION

Master of Computer Applications (MCA) — NIET Greater Noida | CGPA: 8.7 | Oct 2023 – Jul 2025

Bachelor of Science (B.Sc.) — Gurukula Kangri Vishwavidyalaya, Haridwar | CGPA: 9.01 | Aug 2020 – Jun 2023

CERTIFICATIONS & ACHIEVEMENTS

- Certifications: Sigma DSA with Java, React.js, Cloud Computing, MongoDB Data Modeling
- Coordinated a technical event with 500+ participants
- Shipped multiple production IoT and healthcare applications from architecture through deployment
